

ARIZONA MANAGEMENT SYSTEM SUCCESS REPORT

DEPARTMENT OF ENVIRONMENTAL QUALITY

Online Data Reporting Allows One Day Turnaround, Protecting Arizona Groundwater

Department of Environmental Quality staff required up to three months to process and verify groundwater monitoring data submitted by Aquifer Protection permit holders. To streamline the process, the department enabled permit holders to submit their data electronically using an online reporting feature, which also alerted them via email for pending or past due reports. As a result, data validation, compliance status verification and emailed notification occurs within 24 hours. The reduction in elapsed time helps prevent potential environmental damage. Roughly **60% of permittees are using the online data reporting system.**
