DEPARTMENT OF REAL ESTATE

Real Estate Migrates IT Infrastructure to the Cloud for Enhanced Security and Cost Savings

The Department of Real Estate migrated its email and electronic data to the cloud over the three month period April to June 2016 for enhanced security of sensitive information and increased storage capacity.

Centralization of services will **save money** over time, provide **more secure and stable services to the public**, provide the agency the ability to obtain enterprise services where it could otherwise not participate, and **enable future system upgrades** to occur for **less cost**.
